

YACHT RACING PTY LIMITED

As the navigator for Yacht Racing Australia, I am reliant on computer technology to give me the information I need in the quickest possible time frame. This information will hopefully give my team & ultimately my yacht the edge and added advantage needed to perform when it counts.

We have been using the Openfire Series Rugged Portable to run our racing software for the past 2 years. It is also used to access the latest weather information from the internet via Satellite and GSM communication. It is critical in ocean yacht racing to have reliable access to this type of data, the Openfire system provides that reliability.

Ocean yacht racing is a tough environment for a computer to function in, it must be able to survive not only the salt water but the rough conditions that the crew and the boat encounter.

The Openfire definitely survives and performs in our critical application.

Julie Hodder
